

Show only active cases on data entry lists (Y?N)

What it does:

Allows you to only show active cases when you are selecting which case to add something to, such as an event, incident, requirement, etc. It hides the closed cases.

Adding the table entry

Menu | Tables | Generic Validation Tables | Defaults

Code:	ACTIVECASESONLY
Short description:*	<input type="text" value="Y"/>
Long description:*	<input type="text" value="Show only active cases on data entry lists (Y?N)"/>
Active:*	<input checked="" type="radio"/> Yes <input type="radio"/> No

Notes:

On certain data entry screens, such as incidents, stay reasons, documents, events and requirements, it really only makes sense to display active cases for the user to select from when adding information. However, some locations may wish to display all cases instead. If so, set the short description to 'N'.
