Court Events Over a Period

Report Description:

This report will list all completed events for a specific court during a time period. It will list the event date, type, disposition, name, file number, and cause number. It will also list the name and date of any document tied to the event AFTER the event date. This is useful if you want to count how many hearings were held and if you want to see how timely court orders are being prepared on these events.

Running the Report:

Enter the beginning date, ending date and select the specific court, if desired. The Court is the court on the event, not on the case.

Where the data comes from:

This report will search for events with an event date during the time range that match the selected court. It will then search for those that match the "eventType" and "caseType" settings as defined in the report. Of those events, it will search for those that have a disposition code that is not considered "cancelled" according to the Table: Event disposition (EVENTDISP) or has passed but does not have a disposition date yet. It will list the name of anyone in that case with a role that matches the "role" setting.
