

# Add document to order book

## What it does:

---

This function is used to flag a document so that it will be added to the order book. It's only necessary if the document isn't set for approval, which would already place it in the order book.

## Used in template:

---

@v/minute/ MINUTE @V/ FF ADDORBK/03 1 x

## What the user sees:

---

The user doesn't see anything.

## Output:

---

There is no output other than the document being placed into the order book.

## FF ADDORBK/00 – Add preliminary inquiry to order book

---

This function is used to flag the latest PI for each case tied to the document so that the PI will be added to the order book.

## FF ADDORBK/01 – Add predisposition report to order book

---

This function is used to flag the latest PDR for each case tied to the document so that the PDR will be added to the order book.

## FF ADDORBK/02 – Add probation rules to order book

---

This function is used to flag the latest standard rules of probation for each case tied to the document so that the rules will be added to the order book.

## FF ADDORBK/03 – Add current document to order book

---

This function is used to flag the current document so that it will be added to the order book. It's only necessary if the document isn't set for approval, which would already place it in the order book.
