

FF CODES:

Every time you add a new table option to Quest, you don't want to have to modify all your documents so that new option is available. You can just use FF Code!!

These FF Codes all work the same, add a new table entry, such as the Requirement status: Closed due to death.

Code: **DEA**

Short description:*

Long description:*

Still open(Y/N):

Successful(Y/N):

Require Type:

Color:

Phase Status:

Treat Status:

Active:* Yes No

Notes:

Code	Short description	Long description
Add a new entry		
DEA	Death	Closed due to death Still open(Y/N): n Successful(Y/N): n
FAIL	Failed	Failed to Complete Successfully Still open(Y/N): n Successful(Y/N): n

Then, in all your documents where you are automatically helping people close requirements so they can close the case, if you're using FF CODE, this option will be there automatically.

Maximum length (over 75 = Fixed length (ignored for nomax) nomax):*

Function to execute: List items containing:

Lists the table and allows the selection of a single entry. The entry will be formatted as described in the long description.

Important: If you want to limit the list by requirement type or type/code, the first line of the prompt should be type=requirement type or type=requirement type/code. If the variable starts with a +, then notes will be included as well. If variable ends with a +, then a selection is required.

Prompt:*
type=PLAC
Select why the SBC Placement was ended

It pulls up the table entries!

Updating D&N Child Information

Select why SBC was ended

- Select --
- Select --
- DEA - Closed due to death
- FAIL - Failed to Complete Successfully
- NLE - No longer eligible for SBC
- SBCC - SBC Case Closed
- SUC1 - Successfully Completed
- TRA - Transfer Jurisdiction
