```
Apply when:  GAWUser object
   Subtask:  p
             Standard GAWDBObject subtasks:
             'C' - on object creation
             'R' - before referential integrity
             'i'/'I' - before/after insert
             'u'/'U' - before/after update
             'd'/'D' - before/after delete
  Sequence:  1   (Controls the order in which rules will be applied for a given subtask)
Java class:* [ GAW094 - equest.rules.Tennessee.SecurePerson          ▼ ]
```

Provides specialized security based upon hard coded rules.

This should only be used from GAWUser object with a request type of 'p'.

In summary, the rules are:

1. If not from an agency then they must have an open assignment for any cases for any of the attached case names. You can define agencies in RuleParms that don't count as an agency for this rule.

   SecurePerson.notAgency.n=XXXX (where XXXX is the agency to skip)

2. If the employer agency is 'PROB' or 'PROG', or 'COMM' then must have an open requirement code or provider code that matches the user's employer division

3. If limiting by location (the GROUPID Table has a limitToLocation=??? entry), the person must have a matching open location assignment.

   Note: ??? = all, secure, or unit (where the user's employer unit matches the person's current location code)

4. If from an agency, then an open assignment of a person from that agency must exist for any cases for any of the attached case names.

Rule Setup:

Apply when	Sub-task	Seq	JAVA class
GAWUser Object	p	1	equest.rules.Tennessee.SecurePerson

Setting up Attorneys to view Quest:

In Tennessee most attorneys are in the agency "Attorney" so you can pull reports on how many attorneys have been appointed.

This causes a problem because attorneys from the same law office can't view each other's cases. Your name must be assigned to the case in order for you to see that case.

And, if you can see one of the person's cases, you are authorized to view all the cases of anyone who is a party to any of their cases, if the attorney is authorized to view that case type.

1. Make sure you have a security group called "Attorney".
2. Make sure that security group has the correct authority.
    a. Make sure they do not have any access to "**Authorized to view all people and cases**"
    b. They should only be able to view file stamped documents and court orders.
3. Set up this rule
4. Add Rule Parms
    a. SecurePerson.notAgency.1=atty

Set up an attorney with this access, give them a username and password, and log in as them and see what they are able to view. Look at the court docket, can they see all cases? Look at their caseload screen, click on people, click on cases. Verify everything is accurate including what documents they can view.

Remove access to anything to do with medical information!!! HIPPA!!
