

Identity detail screen validations

What it does:

Allows you to define whether specific identity detail screen fields are required or not, such as race, ethnicity, sex, dob, and ssn.

Adding the table entry

Menu | Tables | Generic Validation Tables | Defaults

Code: IDFIELDS

Short description:* Identity Fields

Long description:* Identity detail screen validations

Active:* Yes No

Notes:

```
# Sets whether specific identity detail screen fields are required or not  
  
race.required=n  
ethnicity.required=n  
sex.required=n  
dob.required=n  
ssn.required=n
```

If these fields are required change the =n to =y. Remember that a person can not be added without adding this information, so if it is unknown, the user will have to guess.
