

Local options for users to select

What it does:

Allows you to add links to commonly used internet sites or areas in Quest so users can quickly find them.

Adding the table entry

Menu | Tables | Generic Validation Tables |

Local Options For Users To Select
Entry details

The href to execute along with it's parameters are defined in the notes using proper html syntax to complete the ??? portion of <a ????? tabindex="1">. For example:
href=quest?cmd=valid-quest-cmd or href=/equest/mycounty/myfile.html target="_blank"

Code: SIC
Short description:* Interest Calcul
Long description:* Simple Interest Calculator
Active:* Yes No

Notes:
href=http://www.meracalculator.com/math/simpleinterest.php
target="_blank"

- **Code** – Choose a code. It can be 1-4 characters.
- **Short description** – The short description can be up to 15 characters
- **Long description** – The long description is what the users see, it can be up to 50 characters long.
- **Notes** – This is where you put the path to wherever you are pointing.

Click the **Update** button to save your work.

The above example is pointing to an internet site, if you wanted to point to something else, look at the ones already set up in your system, and if you have questions, call G&W for help.

Code: STAT
Short description:* Statutes
Long description:* ***Statute List***
Active:* Yes No

Notes:
href=quest?cmd=list-statutes
