

Potential identity matches

Report Description:

This report will go through all the people in Quest, added during the time range, and product a list of all possible duplicate people.

Running the Report:

If you specify a requirement type, then at least one of the matching names must have a requirement of that type. This is not a required field.

Name added on or after – this is so you can narrow this report to only names added in the last week or month or quarter.

Name added on or before – same thing. Just a way to narrow the list of results.

I would recommend running this report frequently.

Potential Identity Matches

Enter report criteria and press "Submit"

Requirement type/code to report:

NOTE: You may select a Requirement type and code OR just the Requirement type. If you select something, one of the matching names must have had your selection to be included in the report.

Name added on or after:* 

Name added on or before:* 

The Report:

The first two columns are the first person, the last 2 columns are the potential match to the first person. If they are indeed the same person, they should be merged into one person.

As you can see with Alvarado, it lists the first person, then the next line lists the second person. They are each potential matches to each other.

If you have a list of names in the second person columns and nothing in the first person columns, all names listed in the second person column are potential matches for the last name listed in the first column section.

Potential identity matches Allen County			
Person ID	Name	Person ID	Potential Match
209189	Allen, Co [REDACTED] as	195502	Alle [REDACTED] 1490)
209966	Alvarado [REDACTED] ay (397753)	209967	Alv [REDACTED] Rei (397755)

		115966	Hem [REDACTED] 9020)
		132575	Roge [REDACTED] 8020)
		148045	fath [REDACTED] nknown (374137)
		155340	Narv [REDACTED] van (370025)
		157368	Row [REDACTED] ald (370972)
		158161	Funk [REDACTED] (371373)

Where the data comes from:

This report looks for things such as matching date of birth, matching SSN, and similar names.

Report Settings:

There is no special set up required for this report.

-- Required settings --

class=equest.app.reports.PotentialMatches

-- Optional Report settings --

Enter `personid1/personid2=x` to keep an entry off report

`12345/54321=x`

prompt.parm.4.required=true

prompt.parm.4.default=-1

If you have twins for example, and they constantly appear on this report, you can add their person id numbers to show this id and that id are NOT the same person.

It would look like this:

12345/54321=1

45876/98325=2
