# State decision regarding filing of case

What it does:

This table provides the options for how the state decided the case should be handled. This table can be programmed so that it also updates the case status selection when selected. It can also automatically add the case number.
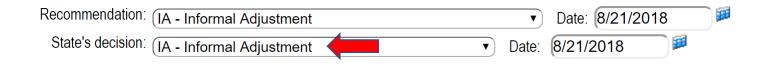

Adding the table entry

Menu | Tables | Generic Validation Tables | Recommendation

- **Code** – Choose a code. It can be 1-4 characters.
- **Short description** – The short description can be up to 15 characters
- **Long description** – The long description is what the users see, it can be up to 50 characters long.
- **Xref Case Sts** – Specifies the case status (or status/reason) table entry that should be set when this decision is used. It will automatically add a case status when this decision is entered.
- **Cause (Y/N)** – If Y, then this decision should generate a case number at the time it is added.
- **Undecided (Y/N)** – If Y, then this decision is still undecided or 'Open'.

Click the **Update** button to save your work.
